REC_Python_Week 7_MCQ

Attempt : 1
Total Mark : 20
Marks Obtained : 17

Section 1 : MCQ

1. Which NumPy function is used to calculate the standard deviation of an array?

Answer

numpy.std()

Status : Correct

Marks : 1/1

2. What does NumPy stand for?

Answer

Numerical Python

Status : Correct

Marks : 1/1

3. Which function is used to create a Pandas DataFrame?

Answer

`pd.DataFrame()`

Status : Correct

Marks : 1/1

4. What does the `np.arange(10)` function in NumPy do?

Answer

Creates an array with values from 1 to 9

Status : Correct

Marks : 1/1

5. What is the result of the following NumPy operation?

```
import numpy as np
arr = np.array([1, 2, 3])
r = arr + 5
print(r)
```

Answer

`[6 7 8]`

Status : Correct

Marks : 1/1

6. What is the output of the following code?

```
import numpy as np
a = np.arange(10)
print(a[2:5])
```

Answer

`[2, 3, 4]`

Status : Correct

Marks : 1/1

7. Minimum number of argument we require to pass in pandas series ?

Answer

0

Status : Wrong

Marks : 0/1

8. What is the primary data structure used in NumPy for numerical computations?

Answer

Array

Status : Correct

Marks : 1/1

9. What is the output of the following NumPy code snippet?

```
import numpy as np
arr = np.array([1, 2, 3, 4, 5])
r = arr[arr > 2]
print(r)
```

Answer

[3 4 5]

Status : Correct

Marks : 1/1

10. What will be the output of the following code?

```
import pandas as pnd
pnd.Series([1,2], index= ['a','b','c'])
```

Answer

Index Error

Status : Wrong

Marks : 0/1

11. The important data structure of pandas is/are ____.

Answer

Both Series and Data Frame

Status : Correct

Marks : 1/1

12. In the DataFrame created in the code, what is the index for the row containing the data for 'Jack'?

```
import pandas as pd

data = {'Name': ['Tom', 'Jack', 'nick', 'juli'],
        'marks': [99, 98, 95, 90]}

df = pd.DataFrame(data, index=['rank1',
                               'rank2',
                               'rank3',
                               'rank4'])

print(df)
```

Answer

rank2

Status : Correct

Marks : 1/1

13. What will be the output of the following code snippet?

```
import numpy as np
arr = np.array([1, 2, 3])
result = np.concatenate((arr, arr))
print(result)
```

Answer

[1 2 3 1 2 3]

Status : Correct

Marks : 1/1

14. What is the output of the following NumPy code?

```
import numpy as np
arr = np.array([1, 2, 3, 4, 5])
r = arr[2:4]
print(r)
```

Answer

[3 4]

Status : Correct

Marks : 1/1

15. In NumPy, how do you access the first element of a one-dimensional array arr?

Answer

arr[0]

Status : Correct

Marks : 1/1

16. What is the purpose of the following NumPy code snippet?

```
import numpy as np
arr = np.zeros((3, 4))
print(arr)
```

Answer

Displays a 3x4 matrix filled with zeros

Status : Correct

Marks : 1/1

17. What is the primary purpose of Pandas DataFrame?

Answer

To store data in tabular form for analysis and manipulation

Status : Correct

Marks : 1/1

18. Which NumPy function is used to create an identity matrix?

Answer

`numpy.eye()`

Status : Wrong

Marks : 0/1

19. Which of the following is a valid way to import NumPy in Python?

Answer

`import numpy as np`

Status : Correct

Marks : 1/1

20. Which NumPy function is used to find the indices of the maximum and minimum values in an array?

Answer

`argmax()` and `argmin()`

Status : Correct

Marks : 1/1
